Business problem

A mid-sized financing company lacked one reliable HR view for recruitment, attrition, onboarding, workforce capacity, hiring cost, and productivity.

Core objective:

turn scattered HR data into an audit-ready workbook for HR action, managerial planning, and executive decisions.

Solution built

- Built a structured Excel tracker with source tables, lookup controls, data dictionary, calculation layer, summaries, and dashboards.
- Designed formula-driven KPIs for hiring, requisition aging, attrition, onboarding, cost-to-hire, productivity, and workforce risk.
- Created three dashboard views: HR Operations, Managerial Workforce, and Executive Workforce.
- Prepared the workbook for SQL and Power BI migration.

Dataset, scope, and model

Synthetic data only:

250 employees, 80 requisitions, 477 candidate applications, 160 hiring cost records, 80 onboarding cases, 48 attrition records, plus monthly workforce snapshots.

Workflow modeled:

manpower need → requisition → recruitment → offer/hire → onboarding → active workforce → attrition/productivity monitoring → dashboard reporting.

Visual proof – Executive dashboard

Executive view of workforce KPIs, hiring pipeline, and risk indicators.

Visual proof – Managerial dashboard

Business value:

surfaces workforce risk, hiring bottlenecks, onboarding gaps, cost efficiency, and priority departments for action.
